MAKSYM HABINSKYI

Frankfurt am Main, Germany | (+49) 160-327-1478 | mgabin348@gmail.com

Dear Hiring Manager,

I am eager to submit an application for the Java Backend Developer position at Siemens company. I am confident that my extensive experience in project management, web development, and my passion for technology and creativity would make me a valuable asset to your team.

In my personal projects, I have had the opportunity to work on a diverse range of tasks, such as developing websites on the Spring framework, creating games and database-related projects using JavaFX, and participating in team projects as an active member. These activities allowed me to continually improve my programming skills and work efficiency.

As for my personal attributes:

- I can quickly adapt to working with new technologies and environments.

- I have experience working in teams and training my friends in using new technologies.

- I enjoy working in a group and prefer it over working alone. I particularly like teaching team members the necessary skills and assisting them in challenging situations.

- I have a strong commitment to completing projects, especially when they are valuable to a team or for university. Even if I feel tired or reluctant to continue, my conscience doesn't allow me to leave the project unfinished. I will do whatever it takes to see it through to completion.

During my time as a freelance application developer, I had the opportunity to work on several applications, one of which focused on combating corruption in my home country, Ukraine. I developed a skill set that allowed me to effectively communicate with clients and understand their requirements. I learned the importance of asking the right questions to refine the task details and create a comprehensive work plan. This enabled me to create and run sprints, ensuring efficient project management. Additionally, I focused on understanding the client's needs and suggesting ideas that would enhance the overall user experience of the application.

In the college, I have acquired project management skills under the guidance of an experienced lecturer with over 10 years of industry experience, who is currently has the position of top manager. As a final assessment of our abilities, our lecturer assigned us the task of managing a project for a hypothetical company. In this exercise, I was responsible for undertaking all the necessary project management steps, which included analyzing the requirements, creating a comprehensive scope and work plan, selecting an appropriate methodology, and expanding the application to three different regions.

I am convinced that, with my technical talents, project management experience, and commitment to self-development and creativity, I would flourish in Java Backend Developer position at your company. I appreciate your consideration and look forward to the opportunity to further on my qualifications.

Sincerely,
Maksym Habinskyi.

Application Developer

Freelance - Germany

November 2024 - Present

- Using Node js to create API for interaction with database
- Making a usable and accessible UI for the customer using React js, HTML and CSS
- Refining the task requirements from the client.
- Assuring that all the requites from the client were met.
- Scoping the requirements. Deciding what will be in scope of work, and what should be discussed with client. Creating the work plan and starting a sprint out of it.
- Discussing the work results and starting another sprint if required.

Personal Projects:

- Spotify clone: This project demonstrates the design and implementation of a music streaming application's user interface, inspired by popular platforms like Spotify. The focus was on creating a clean, intuitive and visually appealing interface. Tools: Supabase, Next js, Stripe, Tailwind CSS.

- Coffee shop: Responsive coffee shop for training of commercial development with React typescript, Redux Toolkit and Next.js. With Routes, React and custom hooks. Shop follows the classic single application structure. Has implemented backend part on Spring with postgreSQL database. Custom written Rest API, services and repositories. Tools: Next.js, React, TypeScript, Redux Toolkit, Tailwind CSS, Spring, PostgreSQL
